

Efficient Software, Exceptional Service

Introducing AusVantage V8

AusVantage V8 is built for greater performance and flexibility. Since inception, we have been fine-tuning specific processes enabling end-users to be more efficient with daily workloads.

The graceful combination of a customizable Windows style interface makes **AusVantage V8** a versatile and user-friendly application.

Building on our previous versions of AusVantage and DISTRIB ERP systems, we paid particular attention to the:

- Normalization of the key Database files to allow for easier reporting, particularly when using 3rd party reporting and data extraction tools
- Development of screen design to provide a more functional user interface
- Reserved custom fields within standard files
- Two-phase commit for transactional data Ability to re-connect after a network disconnection. Current entry screens would not need to be closed and any entered data would still be valid
- Field level help. (Each data entry field has a tooltip)
- Reports have additional viewing/saving options as well as a better presentation
- The ability to save the selection criteria for individual users is also provided
- Gridview for spreadsheet integration
